EFG Chandler Growth Portfolio AMC

April 2022 Factsheet

Investment Approach

The investment objective of the fund is to achieve capital appreciation and yield performance through a conservative strategy, by regularly changing its components in adequation with market conditions. The Index invests in a large scope of asset classes and industries, through global diversification. The fund components will mainly be Equities, Bonds, Funds and Structured Products. The fund aims to:

- Anticipate changing market conditions and tactically allocating the fund's assets to stocks, fixed income products or cash equivalents in response to these changes.
- Ensuring that the portfolio is well diversified.
- Not limiting investment to any asset classes or sectors, subject to investment restrictions.

Manager's Comments

Market Comments

US

US equities fell sharply in April with the S&P 500 and the Nasdaq Composite falling as much as 9% and 13% respectively. Economic data showed signs of weakening while inflationary pressures continued to prompt the Fed into a more aggressive path of interest rate hikes. Several high-profile US tech firms were notably weaker on supply-chain concerns and lacklustre results. CPI increased 1.2% over the month of March, a sharp pick-up from February. This took the annual rate of inflation to 8.5% from 7.9%, its highest since December 1981. Higher fuel prices contributed significantly to the elevated number. The Fed signalled a 50 basis point hike would take place in May in a step up in the central bank's inflationary countermeasures. Meanwhile, industrial activity was broadly weaker, consumer confidence down, and initial data showed a contraction of GDP in Q1. Weakness was widespread. Consumer staples were more resilient, while most other sectors declined. Consumer discretionary companies, unsurprisingly given the damage to consumer confidence, were amongst the weakest over the month. Car manufacturers were especially hard-hit. Netflix, notably, fell sharply after its net loss of subscribers in Q1, the first quarterly decline in users since 2007.

Euro area

April saw further declines for eurozone equities as the war in Ukraine continued and there was no let up in inflationary pressures. Annual eurozone inflation reached 7.5% in April, up from 7.4% in March. Russia halted gas supplies to Poland and Bulgaria after the two countries refused to comply with a decree from Russia that payment must be made in roubles. The best performing sectors included energy, amid ongoing strong demand, and communication services, where telecoms stocks fared well given their defensive profile. Information technology, consumer discretionary and industrials were the weakest sectors. The eurozone economy grew by 0.2% quarter-on-quarter on Q1 and the unemployment rate dipped in February to 6.8%, from 6.9% in January. On the political news aspect, in France, Emmanuel Macron won the French presidential election.

Emerging Markets

Emerging market (EM) equities were firmly down in April, amid a pick-up in risk aversion globally. Increasingly hawkish sentiment from the US Federal Reserve, US dollar strength, concern over the impact of Covid lockdowns in China, and Russia's ongoing war in Ukraine all weighed on the outlook. Poland, which saw its gas supply from Russia cut off, was the weakest market in the index, while neighbouring Hungary also lagged. Asia ex Japan equities were lower in April as China struggled to contain its worst outbreak of Covid-19. This prompted fears that the subsequent economic stoppages could have a wider impact on the global economy and exacerbate the global supply chain shortages. Shanghai, China's largest city and home to almost 25 million people, has been in lockdown since the end of March when cases of the Omicron variant started spiking. Industrial metals sold off amid increased uncertainty over the demand outlook from China, which was negative for net exporters Peru, Brazil and South Africa.

Fund Comments

Very sadly, our fund reported its worst performance ever in April with a downside of 10%, only to be outperformed by the Nasdaq which was down 13%.

A month ago, we thought that most of the bad news were already price-in; inflation, rate hikes, Ukraine war, supply-chain woes, oil and gas price spikes. Yet, all markets continued to fall as high redemptions hit the largest fund managers. We are still confident that most of our choices such as oil, mining, airlines, green energies, luxury and China will rebound as the world puts Covid behind, but this may take a bit of time. We will remain patient.
